Cautionary Statements Regarding Forward-Looking Information

This presentation may contain or incorporate by reference information that includes or is based on forward-looking statements within the meaning of the safe-harbor provisions of the Private Securities Litigation Reform Act of 1995. Forward-looking statements give expectations or forecasts of future events, and can be identified by the fact that they relate to future actions, performance or results rather than strictly to historical or current facts.

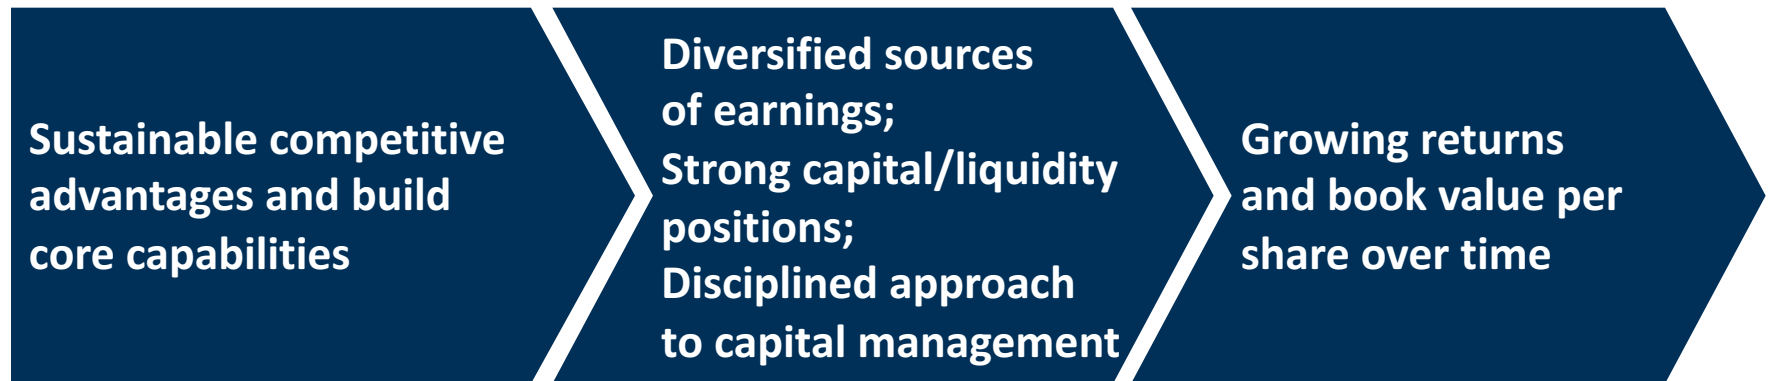

Any or all forward-looking statements may turn out to be wrong, and, accordingly, readers are cautioned not to place undue reliance on such statements, which speak only as of the date of this presentation. Forward-looking statements involve a number of risks and uncertainties that are difficult to predict, and are not guarantees of future performance. Among the general factors that could cause actual results and financial condition to differ materially from estimated results and financial condition are the possibility that the anticipated benefits and synergies from an acquisition may not be fully realized to the extent or within the time frame previously expected and other factors listed in periodic reports filed by Kemper Corporation with the Securities and Exchange Commission (SEC). No assurances can be given that the results and financial condition contemplated in any forward-looking statements will be achieved or will be achieved in any particular timetable. Kemper assumes no obligation to publicly correct or update any forward-looking statements as a result of events or developments subsequent to the date of this presentation. The reader is advised, however, to consult any further disclosures Kemper makes on related subjects in its filings with the SEC.

Non-GAAP Financial Measures

Book Value Per Share Excluding Net Unrealized Gains on Fixed Maturities is a ratio that uses a non-GAAP financial measure. It is calculated by dividing shareholders' equity after excluding the after-tax impact of net unrealized gains on fixed income securities by total Common Shares Issued and Outstanding. Book value per share is the most directly comparable GAAP financial measure. The Company uses the trend in book value per share, excluding the after-tax impact of net unrealized gains on fixed income securities in conjunction with book value per share to identify and analyze the change in net worth attributable to management efforts between periods. The Company believes the non-GAAP financial measure is useful to investors because it eliminates the effect of items that can fluctuate significantly from period to period and are generally driven by economic developments, primarily capital market conditions, the magnitude and timing of which are generally not influenced by management. The Company believes it enhances understanding and comparability of performance by highlighting underlying business activity and profitability drivers.

<u>\$ 49.82</u>	<u>\$ 36.85</u>

Non-GAAP Financial Measures

Adjusted Consolidated Net Operating Income (Loss) is an after-tax, non-GAAP financial measure computed by excluding from Income (Loss) from Continuing Operations the after-tax impact of 1) income (loss) from change in fair value of equity and convertible securities, 2) net realized gains on sales of investments, 3) net impairment losses recognized in earnings related to investments, 4) acquisition related transaction, integration and other costs, 5) loss from early extinguishment of debt and 6) significant non-recurring or infrequent items that may not be indicative of ongoing operations. Significant non-recurring items are excluded when (a) the nature of the charge or gain is such that it is reasonably unlikely to recur within two years and (b) there has been no similar charge or gain within the prior two years. The most directly comparable GAAP financial measure is Income (Loss) from Continuing Operations.

Kemper believes that Adjusted Consolidated Net Operating Income (Loss) provides investors with a valuable measure of its ongoing performance because it reveals underlying operational performance trends that otherwise might be less apparent if the items were not excluded. Income (loss) from change in fair value of equity and convertible securities, net realized gains on sales of investments and net impairment losses recognized in earnings related to investments included in the Company's results may vary significantly between periods and are generally driven by business decisions and external economic developments such as capital market conditions that impact the values of the Company's investments, the timing of which is unrelated to the insurance underwriting process. Loss from early extinguishment of debt is driven by the Company's financing and refinancing decisions and capital needs, as well as external economic developments such as debt market conditions, the timing of which is unrelated to the insurance underwriting process. Acquisition related transaction, integration and other costs may vary significantly between periods and are generally driven by the timing of acquisitions and business decisions which are unrelated to the insurance underwriting process. Significant non-recurring items are excluded because, by their nature, they are not indicative of the Company's business or economic trends.

Non-GAAP Financial Measures

Diluted Adjusted Consolidated Net Operating Income (Loss) Per Unrestricted Share is a non-GAAP financial measure computed by dividing Adjusted Consolidated Net Operating Income (Loss) attributed to unrestricted shares by the weighted-average unrestricted shares and equivalent shares outstanding. The most directly comparable GAAP financial measure is Diluted Income (Loss) from Continuing Operations Per Unrestricted Share.

Kemper believes that Diluted Adjusted Consolidated Net Operating Income (Loss) Per Unrestricted Share provides investors with a valuable measure of its ongoing performance because it reveals underlying operational performance trends that otherwise might be less apparent if the items were not excluded. Income from change in fair value of equity and convertible securities, net realized gains on sales of investments, net impairment losses recognized in earnings related to investments, and acquisition related transaction, integration and other costs included in Kemper's results may vary significantly between periods and are generally driven by business decisions and external economic developments such as capital market conditions that impact the values of the company's investments, the timing of which is unrelated to the insurance underwriting process.

Non-GAAP Financial Measures

Underlying Combined Ratio is a non-GAAP financial measure. It is computed by adding the Current Year Non-catastrophe Losses and LAE Ratio with the Insurance Expense Ratio. The most directly comparable GAAP financial measure is the Combined Ratio, which is computed by adding total incurred losses and LAE, including the impact of catastrophe losses and loss and LAE reserve development from prior years, with the Insurance Expense Ratio.

Kemper believes the underlying combined ratio is useful to investors and is used by management to reveal the trends in the Company's property and casualty insurance businesses that may be obscured by catastrophe losses and prior-year reserve development. These catastrophe losses cause loss trends to vary significantly between periods as a result of their incidence of occurrence and magnitude, and can have a significant impact on the combined ratio. Prior-year reserve developments are caused by unexpected loss development on historical reserves. Because reserve development relates to the re-estimation of losses from earlier periods, it has no bearing on the performance of our insurance products in the current period. The Company believes it is useful for investors to evaluate these components separately and in the aggregate when reviewing the Company's underwriting performance. The underlying combined ratio should not be considered a substitute for the combined ratio and does not reflect the overall underwriting profitability of our business.

Non-GAAP Financial Measures

As Adjusted for Acquisition amounts are non-GAAP financial measures. For the three months ended June 30, 2019, as adjusted amounts are computed by subtracting the impact of purchase accounting adjustments from the comparable consolidated GAAP financial measure reported by Kemper. For the three months ended June 30, 2018, as adjusted amounts are computed by adding the historical results of Infinity reported on a GAAP basis to the comparable consolidated GAAP financial measure reported by Kemper. The Company believes computing and presenting results on an adjusted basis are useful to investors and are used by management to provide meaningful and comparable year-over-year comparisons.
